SUMMARY

Cloud & DevOps Engineer (BCA graduate, Artificial Intelligence) with hands-on experience designing and deploying multi-tier applications and infrastructure on **AWS** — including VPC networking, EC2, load balancing, RDS, IAM, and CI/CD automation. Complements this with project experience in **Generative AI and RAG-based systems**, including LLM integration and vector search. Seeking to apply cloud engineering and DevOps skills in a **Cloud/DevOps engineering role**, with continued interest in applied AI/ML.

TECHNICAL SKILLS

Programming: Python, Bash, SQL

Backend Development: Flask, RESTful API design

Cloud Platforms: AWS (EC2, S3, Lambda, API Gateway, DynamoDB, RDS, IAM, VPC, CloudWatch, SNS, Application Load Balancer (ALB), Auto Scaling, Lambda)

DevOps & Deployment: Linux, Docker, Nginx, Gunicorn, Terraform, GitHub Actions, CI/CD pipelines

Databases & Data: MySQL, DynamoDB, SQLite

AI & Generative AI: RAG pipelines, FAISS vector search, LLM integration, prompt engineering, TensorFlow/Keras, LangChain, n8n

Version Control: Git, GitHub

WORK EXPERIENCE

AI/ML Intern — Elewayte

Sep 2024 – Oct 2024

- Built and evaluated supervised ML models (Logistic Regression, SVM, Random Forest) in Python, achieving up to **88% validation accuracy** across 5+ structured datasets
- Translated model evaluation results into clear, actionable summaries for internship stakeholders, supporting more informed data-driven decisions
- Performed end-to-end ML workflows including data preprocessing, EDA, feature engineering, and model evaluation using Pandas, NumPy, and scikit-learn
- Developed data visualizations with Matplotlib and Seaborn to identify patterns and communicate findings clearly
- Maintained project code and collaboration using Git and GitHub, building team-oriented version control habits

PROJECTS

AI RAG Interview Assistant (GenAI, Cloud-Deployed) | Demo

- Designed and deployed a **RAG-based AI application** on AWS EC2, integrating a pre-trained LLM with a FAISS vector store for intelligent document retrieval over **15+ PDFs**, supporting 10+ concurrent users
- Built the complete AI pipeline: document ingestion, embedding generation, FAISS vector indexing, LLM-based answer synthesis, and RESTful API delivery using Python and Flask, achieving **~30% reduction** in query response time
- Applied prompt engineering techniques to improve LLM response quality and relevance for domain-specific queries
- Containerized the application using Docker with Nginx as reverse proxy, implemented **CI/CD via GitHub Actions**, and authored documentation covering AI workflow design, API structure, and deployment steps

Three-Tier E-Commerce Application on AWS

- Designed and deployed a multi-tier e-commerce application on AWS with a **Next.js/React** frontend and **Flask REST API** backend
- Architected a custom **VPC** with public and private subnets, separate EC2 instances for frontend/backend, and an internet-facing **Application Load Balancer** to simulate real-world infrastructure
- Integrated **Amazon RDS (MySQL)** in a private subnet, **Amazon S3** for static assets, and **IAM** roles for least-privilege service access
- Configured **Nginx** as a reverse proxy and **Gunicorn** with systemd for reliable, auto-restarting backend service management
- Set up **CloudWatch** log collection and CPU utilization alarms integrated with **SNS** for automated email alerting
- Diagnosed and resolved key infrastructure issues including VPC routing misconfigurations, RDS security group access, and environment-based API endpoint mismatches

OPEN SOURCE CONTRIBUTIONS

- Fixed outdated, unclear usage instructions in the **OpenAI Codex** documentation and added canonical, up-to-date usage examples for common workflows, improving onboarding clarity for other developers
- Collaborated with maintainers via GitHub issues and code reviews, and got the pull request merged into the main branch

CERTIFICATIONS

Google Cloud Gen AI Academy 2.0 — Google Cloud × Hack2skill [2026] — [Credential Link](#)

AWS Cloud Quest: Generative AI Practitioner -Amazon Web Services[2026] — [Credential Link](#)

Introduction to Python — IBM — [2023]

EDUCATION

Bachelor of Computer Applications — Artificial Intelligence (2026) Dr. B B Hegde First Grade College, Mangaluru **CGPA: 7.28**
